

INDUSTRIAS DEL HULE SAC

Innovation, Quality y Reliability
Across
the years

Our History

The beginnings of our company date back to 1980, when Carlos Ormeño Heredia, an industrial chemical engineer, retired as Good Year's product development manager, began the development of rubber molds for the manufacture of fine imitation jewelry, with the support of companies in the field that needed the product.

Over time and with the needs of the market, different types of new products were developed for various industries.

By 2018 we were focused on three production lines: black rubber molds, blue silicone molds and discs for water tank biodigesters.

With the arrival of the covid-19 pandemic, in 2020 the journey of developing half-face respirators began in order to provide the market with quality respiratory protection, based on the European standard for Respiratory Protection Equipment. That's why, at the beginning of 2021, the development was completed and we began the manufacturing of the MORE Respirators.

We are characterized by innovation, quality and the support that we give our clients to solve technical problems that arise. They are our main concern.

Our Commitment

Mission

"To satisfy the needs of its customers in the industrial sector at an international level with the best products in the markets of jewelry molds, biodigesters and half-face respirators, distinguishing itself by its high quality at a fair price, maintaining an excellent financial reputation and with a strong commitment to corporate growth and the environment. Also, to develop human talent with the value of honesty as the main pillar of the company. "

Vision

"By 2026, to be a company recognized by its customers for its quality, service and customer service and for being the best in each of its products, through constant improvement of processes, thus becoming a part of the most representative companies' chain in Peru."

Our Products

We have two categories of products:

- Industrial Products.

Industrial products are those that are developed hand in hand with customers, generally manufacturers, that require a component for their equipment or their final products, in this group there are rubber and silicone molds, which have totally different processes by their composition.

- Consumption Products.

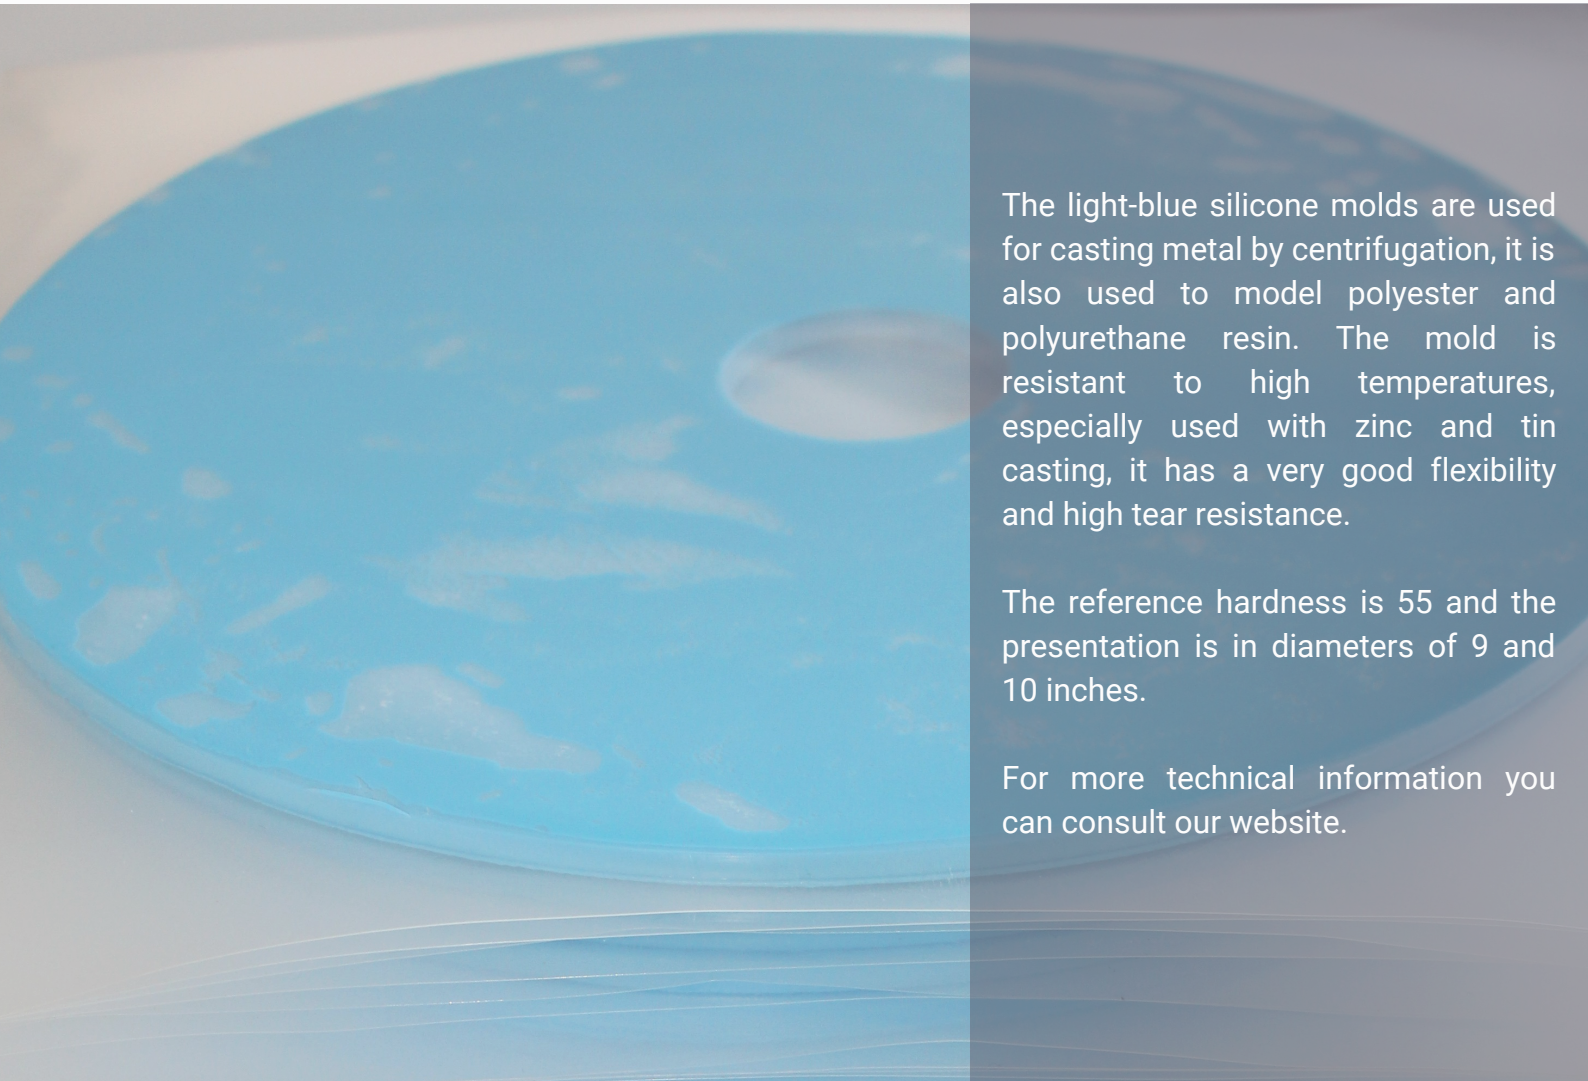

In this category you can find t respiratory protective equipment. The first product M10010, developed is aimed to be used by civil and industrial personnel, it is a PPE product, anti particles, especially for the mining and construction industry.

The DSO Occupational Safety and Health EIRL company, is part of our distribution chain and is in charge of negotiating, selling and distributing the products of this category.

Our Products

Light-blue Silicone Molds

For the manufacture of Fine Imitation Jewelry

The light-blue silicone molds are used for casting metal by centrifugation, it is also used to model polyester and polyurethane resin. The mold is resistant to high temperatures, especially used with zinc and tin casting, it has a very good flexibility and high tear resistance.

The reference hardness is 55 and the presentation is in diameters of 9 and 10 inches.

Our Products

Black Rubber Molds

For the manufacture of Fine Imitation Jewelry

Black rubber molds consist of two 0.5" thick parts, each part having 10 sheets.

Variations in heat resistance from one compound to another are not significant. We have an exclusive formulation initially developed thirty years ago and improved in productivity and quality that is reflected in the number of times it can be used.

Characterized by an extremely high flux during vulcanization resulting in the highest levels of reproducibility in the interpretation of even the finest details in the original patterns.

It is used in imitation jewelry for small to medium size pieces with extremely high flow during vulcanization and easy delamination.

Our Products

MORE Antiparticle Respirator

FFP2 Personal Protective Equipment

The MORE M10010 Respirator with an antiparticle filter is a personal protective equipment for the respiratory tract. It provides respiratory protection in industries where workers are exposed to dust or liquid particles. Está diseñado en forma de copa y cuenta con seis capas filtrantes garantizando una buena protección.

The heat-sealed welding ensures the fixation between the fabrics. Additionally, the clip, nose pad, plus the elastic headgear add to the tightness.

The MORE M10010 Respirator with an antiparticle filter has been developed in accordance with the Peruvian standard NTP 329.201: 2020 which is based on the European standard 149: 2001 + A1 for EPI FFP2 respirators, with an efficiency of 94% of the particles of 0,3 microns.

Technical information and certification is available on our website.
